Summary

Full-stack developer skilled in the MERN stack (MongoDB, Express.js, React.js, Node.js), with experience building AI-integrated and e-commerce web applications. Strong foundation in data structures, algorithms, REST APIs, and end-to-end product development, from database design to responsive UI.

Education

Baderia Global Institute of Engineering & Management
Bachelor of Technology in Computer Science and Engineering; CGPA: 7.16 2023 – 2027

Skills Summary

- **Languages**: JavaScript, TypeScript, Java, C++
- **Frontend**: React.js, Next.js, Redux Toolkit, HTML/CSS, Tailwind CSS
- **Backend & Databases**: Node.js, Express.js, MongoDB, Mongoose, Redis, REST APIs, JWT Authentication
- **Cloud & DevOps**: AWS (S3), Docker
- **Tools & Platforms**: Git, GitHub, Vercel, Render

Projects

IgrisAI: Multi-Agent AI Chat Workspace Live Demo — GitHub

- Built a chat-based AI workspace with a LangChain/LangGraph multi-agent workflow that routes requests to general chat, coding, and Tavily-powered web search agents, using Groq, Google Generative AI, and OpenRouter models.
- Architected a microservices backend (API gateway plus auth, chat, agent, and billing Express services) with Google sign-in, cookie-based session checks, MongoDB for data, and Redis for sessions and agent memory.
- Implemented PDF question answering, image analysis and generation, and PDF/PowerPoint generation, storing outputs on AWS S3 and delivering them through temporary download links.
- Integrated Razorpay checkout with credit-based plans (Free, Starter, Pro); containerized services with Docker and set up a GitHub Actions CI/CD workflow targeting AWS.

Tech: React, Vite, Redux Toolkit, Tailwind CSS, Node.js, Express.js, MongoDB, Redis, LangChain, LangGraph, AWS S3, Razorpay

Interview Maker: AI-Powered Job Match & Interview Prep Platform Live Demo — GitHub

- Built an AI-powered MERN stack application that analyzes a user's resume or self-description against a target job description to generate a resume-to-job match score.
- Designed a skill gap analysis engine that compares the user's existing skills with role requirements and highlights missing competencies.
- Integrated AI to auto-generate role-specific technical and behavioral interview questions, helping users practice for real interview scenarios.
- Developed a personalized 5-day learning roadmap generator that breaks down skill gaps into a structured, day-wise study plan.

Tech: MongoDB, Express.js, React.js, Node.js, AI/NLP APIs

ShopIT: Full-Stack E-Commerce Platform Live Demo — GitHub

- Built a full-stack e-commerce web application using the MERN stack, supporting product browsing, filtering, and detailed product views.
- Implemented cart management allowing users to add, update, and remove items with real-time price calculation.
- Developed secure user authentication and authorization using JWT, protecting user accounts and order data.
- Integrated a secure payment gateway to handle order placement and checkout, enabling end-to-end transaction processing.

Tech: MongoDB, Express.js, React.js, Node.js, JWT, Payment Gateway

Achievements

- Solved 100+ Data Structures & Algorithms problems on LeetCode.
